MPS Calculator: proposed Home screen SAMPLE

Mockup for your approval before any build. One page: six figures on top (each one a link to the matching quotes), a *Needs follow-up* list, and the work queue below. Every number and name is made up.

Brief B45 · 12 Oct 2026 · the calculator's own colours and font (`tokens.md`, 3 NEW tokens) · light theme only · money AUD ex GST (C-04) · no GP, margin or cost on the page (FR-DB-010).

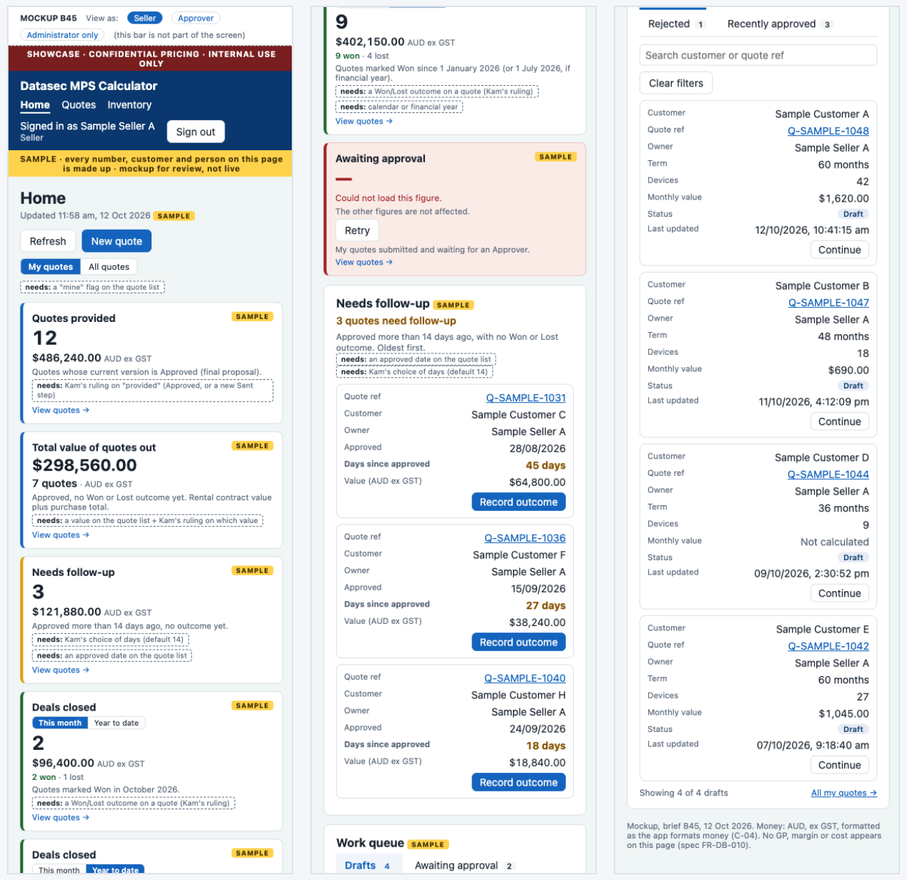

One line to overrule: spec FR-DB-001 says the Dashboard is a pricing work queue, not analytics; your request is newer, so the figures sit on top and the work queue stays below. Say if you want only one of them.

Seller view at 1440 px (`renders/2026-10-12_home-seller-1440.png`). The red tile shows one figure failing on its own; the rest still load. Approver and Administrator-only views: `renders/…-approver-1440.png`, `…-admin-1440.png`.

#	Your metric → tile	Click-through (`href`)	Today	Marker on the tile (what it needs)
1	Quotes provided	`#/quotes?scope=mine&status=approved`	Count: yes (list status)	needs: your ruling on "provided" (Approved, or a new Sent step)
2	Total value of quotes out	`#/quotes?scope=mine&status=approved&outcome=open`	No: the list has no value	needs: a value on the quote list + your ruling on which value (default: rental contract value + purchase total, ex GST)
3	Needs follow-up (and the list)	`#/quotes?scope=mine&followup=due`	No: the list has no approved date	needs: an approved date on the quote list; your choice of days (default 14)
4	Deals closed, this month	`#/quotes?scope=mine&outcome=won&period=month`	No: nothing records Won/Lost	needs: a Won/Lost outcome on a quote (your ruling, incl. who sets it)
5	Deals closed, year to date	`#/quotes?scope=mine&outcome=won&period=ytd`	No: as 4	as 4 + needs: calendar or financial year (from 1 July)
+	Awaiting approval (Seller) / Awaiting my approval (Approver)	`#/quotes?scope=mine&status=submitted` / `#/quotes?status=submitted&canApprove=true`	Count: yes (status; `callerCan.approve`)	value needs: a value on the quote list
	Scope switch (Seller)	`#/?scope=mine` · `#/?scope=all`	No	needs: a "mine" flag on the quote list (owner name is not unique)

Every click-through is a new filtered-list route (the router has no query today). Work-queue columns Term, Devices and Monthly value also need fields on the list (FR-DB-004).

Seller view on a phone, 390 px (`renders/2026-10-12_home-seller-390.png`), read top to bottom across three columns. No sideways scroll (measured); tables become cards.

Roles

- **Seller:** figures default to *My quotes*, with an *All quotes* switch; New quote; follow-up action *Record outcome*.
- **Approver:** all quotes, plus *Awaiting my approval* (never their own, C-12); work queue opens on *Awaiting approval*.
- **Administrator only:** no figures, as today ("Your roles do not include quotes."). *needs: your ruling if Administrators should see the metrics.*

Better than the Vision dashboard it borrows its layout from

- Every tile is a link to the matching quotes (Vision's tiles do not click).
- A value under every count, and This month / Year to date on the closed tiles (Vision: counts only, no period).
- Australian dollars, ex GST, as the calculator formats money (Vision defaults to US dollars).
- One figure can fail on its own (Vision blanks the whole page).

New words for you to approve (46; full list in `NEW_WORDS.md`)

Home · Updated *time* · My quotes / All quotes · Quotes provided · AUD ex GST · View quotes → · Total value of quotes out · Needs follow-up · *n* quotes need follow-up · Deals closed · This month / Year to date · *n* won · *n* lost (a new Won/Lost outcome) · Awaiting approval · Awaiting my approval · Could not load this figure. · The other figures are not affected. · Retry · Owner · Days since approved · Value (AUD ex GST) · Record outcome · Open · Show all · Work queue · Drafts · Rejected · Recently approved · Search customer or quote ref · All owners · Clear filters · Monthly value · Last updated · Continue · Review · Not calculated · Showing *n* of *n* · All my quotes, plus the one-line definitions under each tile.

Nav becomes Home · Quotes · Inventory: today's "Quotes" page (#/) becomes Home, and Quotes becomes the full, filterable list.
