HPSM-POC: 11 new messages for your approval (import and demo reset)

Datasec / HPSM-POC · Tuesday, 13 Oct 2026 · Source: `1_Project_Definition/Briefs/2026-10-13_B232_STATUS.md`, NEW WORDS

BLUF: The QA gate (B232) passed B230 and B231 with notes, and those two changes add 11 sentences a user or the API can now show; they need your yes before the next hosted deploy. One more sentence (the hosted "Demo reset" success line) is already approved under POC-12 and is listed only for completeness.

Nothing reaches the hosted site before HP's 13 Oct review. These words stay off the hosted site until you approve them on the card; the next hosted deploy waits for this card and the timing card.

Already approved under POC-12 (no action)

#	Sentence (verbatim)	Where it shows	When a user sees it	Seat
W-0	Demo reset: the sample customers and their assessments are back to their starting state.	Hosted site, top-bar "Reset demo" message (`AppShell.tsx:61`); replaces "…the offline demo is back…"	Each time a hosted demo reset succeeds	SEAT-B (B231)

For Kam: 11 sentences

Unless the row says otherwise, each sentence is shown after this lead-in (`AppShell.tsx:66`, unchanged): "This screen's demo state was cleared, but the sample data could not be reset: ". "Laptop showcase" means the laptop demo; "Hosted demo" means the hosted site's demo reset.

#	Sentence (verbatim)	Where it shows	When a user sees it	Seat
W-1	Nothing was reset: the service took too long. Try again in a minute.	Reset message, hosted demo and laptop showcase (`client.ts:344`)	A reset times out (504 at the 90 s limit). Shows as "… could not be reset: Nothing was reset: …" (double colon). QA: true, except if the reset finishes exactly as the timer fires (not tested)	SEAT-B (B231)
W-2	The reset failed part-way and was rolled back. Nothing changed: the showcase still shows the data it had before. Try again in a moment.	Reset message, laptop showcase	A showcase reset fails part-way and is undone	SEAT-B (B231)
W-3	Another reset was still writing the showcase. Nothing changed: the showcase still shows the data it had before. Try again in a moment.	Reset message, laptop showcase	Reset pressed while another reset is still running	SEAT-B (B231)
W-4	The reset's last step could not be confirmed, so it is not known whether it happened: the showcase now shows either freshly reset data or the data it had before. Reload to see which, and reset again only if it still shows the old data.	Reset message, laptop showcase	The reset's final save can't be confirmed. QA flag: the lead-in says "could not be reset", which may be untrue here	SEAT-B (B231)

#	Sentence (verbatim)	Where it shows	When a user sees it	Seat
W-5	The reset failed part-way and was rolled back. Nothing changed: the demo still shows the data it had before. Try again in a moment.	Reset message, hosted demo	A hosted demo reset fails part-way and is undone	SEAT-B (B231)
W-6	Another reset or a host start-up was still writing the demo data. Nothing changed: the demo still shows the data it had before. Try again in a moment.	Reset message, hosted demo	Reset pressed while another reset or a server start-up is still writing	SEAT-B (B231)
W-7	The reset did not start: its seed would score the samples with a ruleset this demo is not set up to use. Nothing changed: the demo still shows the data it had before. Trying again will not help until the demo's configuration is corrected.	Reset message, hosted demo	The demo's set-up has the wrong ruleset (checked before anything changes)	SEAT-B (B231)
W-8	The reset's last step could not be confirmed, so it is not known whether it happened: the demo now shows either freshly reset data or the data it had before. Reload to see which, and reset again only if it still shows the old data.	Reset message, hosted demo	The reset's final save can't be confirmed. Same lead-in problem as W-4	SEAT-B (B231)
W-9	…could not be reset: the service took too long, so nothing changed. Try again in a minute.	Alternative to W-1 (same place)	Same as W-1; fixes the double colon. Same truth as W-1	SEAT-B (B231, alternative 1)
W-10	…the service took too long and the reset was stopped. Reload to check, then try again if it still shows the old data.	Alternative to W-1 (same place)	Same as W-1. QA: true on every path, including the finish-as-timer-fires case	SEAT-B (B231, alternative 2)
W-11	The files could not be kept (the database refused a write); nothing was read.	API only: the import run's `reason` (`GET /imports/{id}`, `ImportEndpoints.cs:142`); no screen shows it	An import fails because the database refused a write. B230 added this although its brief said stop for new words (QA conformance note)	SEAT-A (B230)

W-9 and W-10 are alternatives to W-1: if you approve all, the seat still needs to know which of W-1 / W-9 / W-10 to ship (QA's truth note favours W-10). Count: SEAT-B 10, SEAT-A 1. Also noted, not new: a reset that hits an unknown, blank or HTML 503 still says "The service is not configured on this server.", which is only true when the API is off.
